Restore Evidence Report

October 2026

Period 01 Oct 2026 to 31 Oct 2026, Australia/Brisbane.

Summary

- This month: some servers tested haven't passed yet (listed under Failures).
- Failed restores: some still open (listed under Failures, with what happened since).
- Longest time to get a server back: 8.3 h.
- Every server tested within its schedule: no, some not yet (listed under Not covered).

How each test works

AutoRPO restores each server's newest backup onto a separate test host on an isolated network, boots it, checks it and then deletes the copy. Restoring from Proxmox Backup Server also verifies every chunk's checksum. Hyper-V backups (Windows Server Backup or exports) are only ever read, never changed. A person signs off every test as passed or failed. Retest interval by tier: Critical 30 days, Important 90 days, Standard 180 days.

Tests

Test	VM	Backup	Result	RTO	Checks	Signed off
1	**dc01**	30 Oct 2026 23:43	**Passed**	39 min	**7/7**	Jane Smith, Reviewer jane.smith@example.com 31 Oct 2026 05:43

Test	VM	Backup	Result	RTO	Checks	Signed off
9	**hr01**	07 Oct 2026 20:43	**Passed**	34 min	**7/7**	Jane Smith, Reviewer jane.smith@example.com 08 Oct 2026 04:43
10	**INTRA01**	28 Oct 2026 19:43	**Passed**	4 min	**7/7**	Jane Smith, Reviewer jane.smith@example.com 29 Oct 2026 03:43
11	**mon01**	25 Oct 2026 18:43	**Passed**	14 min	**7/7**	Jane Smith, Reviewer jane.smith@example.com 26 Oct 2026 02:43
12	**sql01**	16 Oct 2026 20:43	**Passed**	1.1 h	**7/7**	Jane Smith, Reviewer jane.smith@example.com 17 Oct 2026 04:43
13	**vpn01**	13 Oct 2026 19:43	**Passed**	4 min	**7/7**	Jane Smith, Reviewer jane.smith@example.com 14 Oct 2026 03:43
14	**web01**	10 Oct 2026 18:43	**Passed**	4 min	**7/7**	Jane Smith, Reviewer jane.smith@example.com 11 Oct 2026 02:43
20	**print01**	31 Oct 2026 02:08	**Passed**	6 min	**7/7**	Sam Lee, Admin sam.lee@example.com 31 Oct 2026 09:08

Checks are shown for tests that passed; a failed test's checks aren't counted.

Sign-off notes

Test	VM	Notes
1	dc01	Logged in, Samba AD services running, dbcheck clean
3	print01	CUPS print service fails to start
4	wiki01	nginx fails to start after the 1.27 update: config error
5	SHARES01	Logged in; file shares and DFS namespace present
20	print01	CUPS config restored from the change log; prints a test page

Failures and how they were resolved

Test	VM	Result	What happened	Resolution
3	**print01**	**Failed**	CUPS print service fails to start	**Passed on 31 Oct 2026 (test 20)**
4	**wiki01**	**Failed**	nginx fails to start after the 1.27 update: config error	**Open: retest due**

Not covered

Servers with a backup on PBS or a Hyper-V backup share that haven't passed a restore test within their tier's interval, as of when this report was generated, including servers left out of testing on purpose.

VM	Client	Tier	Last passed	Why
wiki01	—	Standard	never	Last test failed

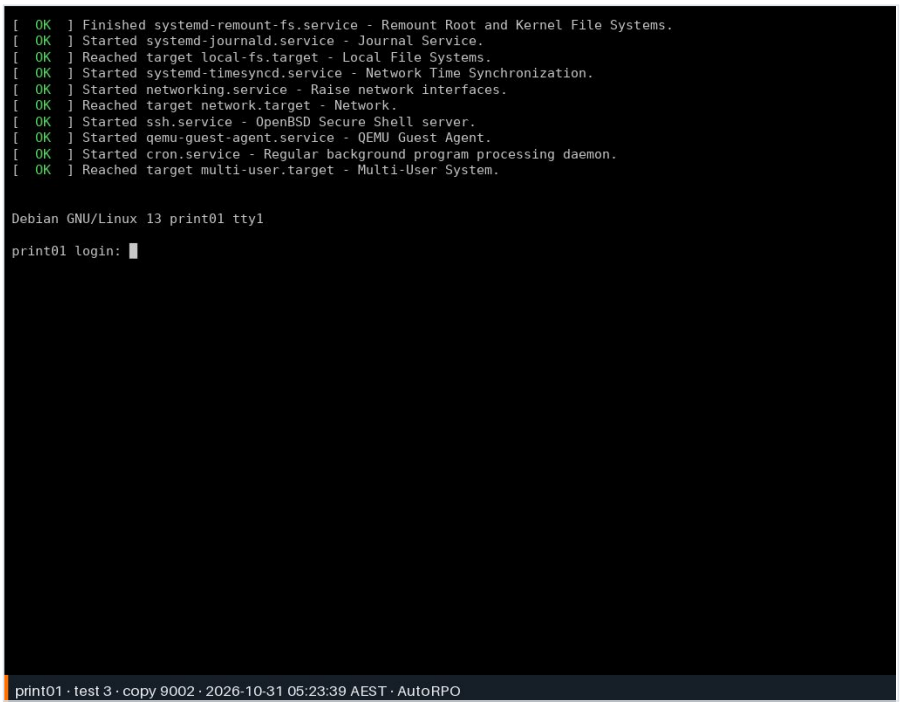

VM	Client	Tier	Last passed	Why
crm01	—	Standard	never	Never tested: in the queue
erp01	—	Standard	never	In test now

Test details

Each failed test has a page of its own: the screenshot, every check and what failed. Each passed test has a short card, its checks shown as counts against the VM's last pass, never names of ports, services or databases, so the report can be shared without mapping the network.

print01 · test 3

VM	**print01**	**Result**	**Failed**
Backup	30 Oct 2026 23:43	**Restore time**	5 min
RTO	—	**Backup age at restore**	5.4 h
Signed off	Sam Lee, Admin sam.lee@example.com 31 Oct 2026 05:43	**Resolution**	**Passed on 31 Oct 2026 (test 20)**
Notes	CUPS print service fails to start

Signed evidence

This file's SHA-256 is recorded and signed by the AutoRPO install that made it (evidence key **4fdbaa657dab70d6**). To check a copy is genuine and unaltered, upload it under Evidence in that AutoRPO, or check the detached signature file with the install's public key. The signature proves this file is exactly what that install produced; where a time-stamping service is set up, the signature file also holds an independent timestamp.
